An Ecosystem for Caribbean Data Sharing

A public good for the Caribbean

Data availability and accessibility in the Caribbean is limited ● This public good will encourage data sovereignty for the Caribbean Small Island Developing States

Why is this needed?

The global data and analytics environment is evolving rapidly ● Data handling in this fast-moving field is increasingly complex ● Data without best-practice data handling is regularly unusable

How can this help the Caribbean?

Enable and champion data sharing and data re-use ● Work with and support country partners Complement existing regional data initiatives ● Foster University, Government and Industry data collaboratives ● Identify cross-discipline opportunities ● Focus on sustainability

Our Activities

Infrastructure
Online software for data planning, data collection, data sharing.

Data Planning
DMP Online

Data Collection
REDCap

Data Sharing
CKAN

Training
Data-handling courses, online best-practice guidelines, public events on data sharing and open data.

Courses &
Mentoring

Guidelines

Workshops &
Conference

Analytics
Generating new knowledge from secondary data.

Data Re-Use

Data Stories

Open-Access
Analytics

Collaboration
Establishing networks of data stakeholders to support collaborative working

Networks

University, Government
& Industry

Multi-Disciplinary
